F G Diagnostic and interventional sonography of the carotid arteries. . Conserved human tumors and animal models.. Â Grego G, et al. . sequence-specific DNA-binding protein?X E. Tetrandrine or Stephacoside A. .1. Field of the

Invention This invention relates to a lubricating oil composition for a refrigerant compressor. More particularly, the invention relates to a refrigerant compressor lubricating oil composition containing an ester of alkylphenol and a fatty acid as an anti-oxidant.

2. Description of the Prior Art Refrigerant compressors comprise a compressor unit including a compression mechanism, an oil reservoir and a lubricating oil containing a

---

refrigerant therein, and a lubricant supply means for supplying the lubricating oil to the compressor unit. In the compressor lubricating oil, a phenomenon of oxidation occurs which promotes rapid deterioration of the refrigerant compressors. In order to inhibit the oxidation of the lubricating oil, a stabilizing anti-oxidant has been added to the lubricating oil, and most common anti-oxidants have been phenolic anti-oxidants such as phenylmercaptan, the condensation products of phenol and formaldehyde, dialkyl gallates or the like. In addition to the phenolic anti-oxidant, there is a known hydrocarbon anti-oxidant such as pentaerythritol tetraethylhexanoate or pentaerythritol esters of higher alcohols. When an ester of an alcohol and an aliphatic acid is used as a stabilizing anti-oxidant, the acid moiety of the ester is dissociated by contact with moisture as in air at a high temperature and deposited as a salt on a surface of the metal for use as the compressor, thereby causing a problem of corrosion of the metal. When an ester of a phenolic anti-oxidant is used as the anti-

---

oxidant, the ester may decrease the oxidation prevention effect of the phenolic anti-oxidant because of the esterification of the phenolic anti-oxidant as described above.

Digital camera and lens designs are constrained by current and future electrical requirements and the need to minimise their size to provide a compact digital camera. Conventional digital cameras generally use an electrically operated mechanical shutter in order to provide a controlled exposure of the photographic image. Such a shutter normally has a state in which it is closed and another state

angioplasty in a case with severe PAD and  
carotid artery disease together with E. ..  
.Multicenter long-term follow-up of patients  
with alcoholic liver disease: correlation  
between liver disease and mortality risk  
factors. To evaluate a group of long-term  
survivors of alcoholic liver disease after 10 to  
20 years of follow-up and to determine the risk  
factors that correlate with mortality. A review  
of the charts of 263 patients, diagnosed with  
alcoholic liver disease, who were followed for  
at least 10 years, was performed. Most  
patients were assessed in a single center  
during the follow-up. Forty-two percent of the  
patients were females, and 58% were male.  
The mean age of diagnosis was 35.2 years.  
Most patients were single (47%), had legal  
status (85.5%), and had children (73%). Thirty-  
four patients (13.1%) died during the follow-  
up. Smoking, malnutrition, diabetes, and  
hepatic fibrosis were risk factors for mortality.  
In multivariate analysis, cirrhosis (P
